- Cooking
- Travelling
- Skiing
- Reading
- ...Tech!

WORK EXPERIENCE

LOTTIE

Lottie.org is redefining the care industry through transformative health-tech solutions as the world's first SaaS-enabled marketplace. It allows families to book care online for their loved ones. Think Airbnb or Booking.com for care homes.

Played a key role at Lottie's early-stage start-up, contributing to its growth from inception through to a successful Series A funding round and winner of LinkedIn's Top Startup winner award.

Lead/Staff Software Engineer

May 24 - Present

- Led a team of 3 engineers of varying seniority - Weekly 1:1s and planning meetings with the engineering team and separate planning with other departments to ensure the roadmap and resources were aligned.
- Lottie Partner Portal 2.0 - Internal tool for Lottie Partners to view and manage enquiries as well as review, filter and download custom insight reports. Part of a small team who launched the application from scratch in less than 5 months to over 400 partners

Senior Software Engineer

Mar 22 - Mar 24

- Led the launch of a customer-facing 'wizard' application, enabling users to seamlessly enter care requirements and receive a tailored shortlist of services directly to their inbox, significantly enhancing user engagement and lead generation.
- Refactored the website search functionality by integrating Algolia, resulting in faster, more accurate search results and an improved overall customer experience.
- Introduced and developed a new vertical for Lottie, expanding our offering to support customers planning for retirement and broadening our target audience.
- Led the migration of the website from WordPress to Next.js, improving site performance, scalability, and maintainability for both customers and internal teams.

WORK EXPERIENCE CONTINUED

GAIN (PREVIOUSLY CATCH DIGITAL)

Catch Digital is a digital agency based in the heart of Soho specialising in marketing, design and website solutions. In house teams of design, frontend and Drupal backend developers were a part of creating bespoke websites and application solutions for international clients.

Front End / Software Developer

Apr 19 - Mar 22

- Building a responsive web application, booking platform and mobile app for IQ Student Accommodation using React.js and Drupal CMS.
- Lead Front End Developer for an Adspend Reporting Tool for the Interactive Advertising Bureau. Members could login and use the tool to get a breakdown of money spent and trends for multiple data points whilst filtering these for environmental or device breakdown.
- Other work includes Drupal builds for clients including Freeview, Tony Blair Institute, SES Satellites, Chelsea Barracks Development, Salford University and IOP.
